

7000 PLUS

DESCRIPTION

The 7000 Plus is similar to the standard 7000 series but with the added feature of a grizzly vibrating feeder. This means the crusher can be loaded with either a loading shovel or excavator bucket and the feeding process is managed by the vibrating feeder.

They are very simple to operate and incredibly cheap to run. The 7000 Plus simply cannot be matched for its reliability, performance and versatility by any other product on the market. The wireless remote control system means safe operation of the crusher from the safety of an excavator or loading shovel cab.

Purchasing a 7000 Plus for recycling demolition and construction waste is a cost efficient method of avoiding large landfill costs, onsite recycling and reducing demolition rubble to a useable product. Crush your rubble for less than £1 per tonne.

Simply drive the crusher into position, select the desired output size, start the crusher and conveyor system and start to crush – up and crushing in less than 5 minutes.

By adding a magnet conveyor to this crusher there is the added benefit of removing the steel found in your rubble but also recycling this “waste” steel to the scrap yards for additional financial value gain.

STANDARD FEATURES

- Jaw aperture of 700mm x 400mm
- Output size choice from 15mm to 120mm
- Deutz 70 hp Air cooled Diesel Engine
- NEW type of Grizzly Feeder
- Fuel consumption approx 10 litres per hour
- Output can be up to 45 tonnes per hour
- Wireless remote control system for all functions
- CE marked

DIMENSIONS

- Length: 7250mm
- Width: 2200mm
- Maximum Height: 2800mm
- Loading Height: 2300mm

Red Rhino 7000 Series plus exceeds customer expectations...

Keith Maiden Testimonial of 7000 Plus Crusher

Dorset Based Compact-crushing.co.uk run by Keith Maiden specialises in compact crushing and screening operations using a comprehensive range of hydraulic attachments for 8 tonne zero tail swing excavator crushing concrete/brick rubble and rock is carried out with the new Red Rhino 7000 Plus vibrating feed hopper machine.

Keith Maiden tells us having tried numerous 3 to 8 tonne crushers over the last 6 years with varying degrees of success the arrival of the 7000 plus has completely changed the efficiency of his operation. The machine is extremely quiet, fuel efficient and very productive.

"Having operated it for some 300 hours from new the build quality and overall design are definitely in a class of their own. With the vibrating feed hopper the machine is now a one man operation. A controlling feed from the remote box in the excavator cab really does work well especially in the rain.

The machine always impresses my customers and has proved to be an excellent purchase and looking forward to many years of good service from this machine."
